

William Rhodes

SOFTWARE ENGINEER & DEVELOPER | BS IN COMPUTER SCIENCE 2025

Cypress, TX | wtrhodes.dev@gmail.com | 469-223-6837 | github.com/troyrhodes02 | linkedin.com/in/wtrhodes/

Professional Summary

Full-Stack Software Engineer skilled in TypeScript, React, and Node.js. Experienced in designing and developing scalable SaaS platforms, REST/GraphQL APIs, and cloud-native architectures with secure authentication and CI/CD automation across modern enterprise systems.

Experience

FreightFi | Software Engineer | October 2025 – Present

- Built core features for an early-stage startup SaaS using JavaScript/TypeScript, Node.js, Next.js, Prisma, and Supabase to automate freight audit analysis, reducing manual review time from 30+ minutes to under 30 seconds.
- Designed automated data flows that ingest, normalize, and analyze document-based quality data, enabling consistent recalculation of discrepancies and improving reliability of downstream engineering decisions.
- Developed tooling to surface and correct data inconsistencies at the line-item level, ensuring engineering and quality teams work from a single, accurate source of truth rather than manual spreadsheets or rework.
- Collaborated closely with stakeholders to define expected outcomes, constrain scope, and iteratively deliver production-ready solutions aligned with real operational workflows.

ArkaTech | Software Engineer | January 2024 – August 2025

- Architected and developed full-stack applications using React, TypeScript, GraphQL/Apollo, and React Native/Expo, integrating REST/GraphQL APIs and delivering cross-platform features for iOS, Android, and web.
- Built multi-tenant SaaS infrastructure using Supabase, Prisma, and PostgreSQL, implementing RBAC models, secure data workflows, and scalable service boundaries.
- Led a 4-engineer team through a 9-month development cycle, delivering production-ready applications to 100+ users across web and mobile, while improving deployment velocity through CI/CD pipelines.
- Deployed containerized services on Google Cloud Run with Firebase/MongoDB integrations, supporting both mobile and web client apps and launching MVPs on 3-month cycles.

Prairie View A&M University | IT Software Applications Developer I | November 2023 – Present

- Developed automated workflow systems with dynamic form routing logic and SharePoint-based document management, implementing real-time tracking and version control for enterprise operations serving 10,000+ users
- Managed enterprise-level user provisioning and access control across multiple platforms (Pathify, DocuSign, DynamicForms) while ensuring FERPA compliance and collaborating with department heads to integrate custom UI components

Skills

Frontend:

React • Next.js • TypeScript • JavaScript • Tailwind CSS • Material UI • HTML • CSS • Jest • Responsive Design

Backend:

Node.js • TypeScript • JavaScript • GraphQL • REST APIs • tRPC • Prisma ORM • PostgreSQL • MongoDB • Authentication • RBAC • Stripe/Square Integration

DevOps / Cloud:

Docker • Google Cloud Platform • Firebase • Supabase • CI/CD • Git • Agile Development

Projects

FreightFi — *Next.js, TypeScript, Node.js, Prisma, Supabase, OpenAI*

Built a freight audit SaaS that uses LLM-powered document extraction to automate payout reconciliation between rate confirmations and invoices. Implemented line-item correction workflows, persistent shareable audits, and exportable summaries, reducing manual audit time from 30+ minutes to under 30 seconds.

RhodesHub — *Next.js, TypeScript, Node.js, Prisma, Supabase, OpenAI*

Built a production-style AI-powered portfolio and resume intelligence platform with a shared engine supporting both a public demo and a private admin system. Designed deterministic resume-to-job analysis using embeddings, vector search (pgvector), and RAG-based explanations with strict permission boundaries, showcasing real-world AI system architecture and evaluation-ready design.

PolitiMap — *React, Next.js, Tailwind CSS, React Native, GraphQL, Mapbox*

Built an interactive civic-engagement app connecting a React frontend to GraphQL APIs and Firebase Auth for real-time data visualization. Containerized and deployed on GCP with Docker, optimizing query handling and cross-platform performance.

PremierLeaf — *React, Next.js, TypeScript, Material UI, Stripe*

Created a full-stack e-commerce web app integrating Stripe payments and secure auth flows. Focused on responsive UI and checkout UX to improve conversion and performance across devices.

GoNext — *React Native, TypeScript, Node.js, MongoDB, Stripe*

Developed a cross-platform event registration app with React Native and Node.js, integrating MongoDB APIs and Stripe payments for secure transactions.
